## CPX Wireless Remote Controllers

The CPX-TR Series of hand-held transmitters operate in conjunction with the CPX-RC Series Receivers to perform remote switching tasks through the CPS and MCP Series of Touch-Plate Control Panels. Each transmitter in the CPX-TR Series is powered by a self contained 9 volt battery. A battery test / transmit L.E.D. is located on the face of the unit. Internal dip switches are used to set the code for each transmitter and receiver. The transmitters are available in 1, 2, 4 or 6 channels. The CPX-TR6, the 6 channel transmitter, looks identical to the CPX-TR4, the 4 channel receiver, but incorporates two additional switching channels by operating two buttons at the same time. The transmitters are FCC certified and operate at a frequency of 303.875 MHz.

The CPX-RC Series Receivers operate along with the CPX-TR Series Transmitters. They are housed in their own plastic case with an antenna attached. They receive their operating power from the CPS or MCP Panels that they are controlling.
