

Touch-Plate® Lighting Controls

Eclipse / Low Voltage Switches

The Eclipse:

The Touch-Plate Eclipse switches offer a distinctive style with small horizontal buttons. The same great feel and response as the Ultra series, but in a more economical plastic cover package. A wide range of button and LED configurations are available to accommodate most control applications. The Eclipse is an extremely reliable switch at a very economical price.

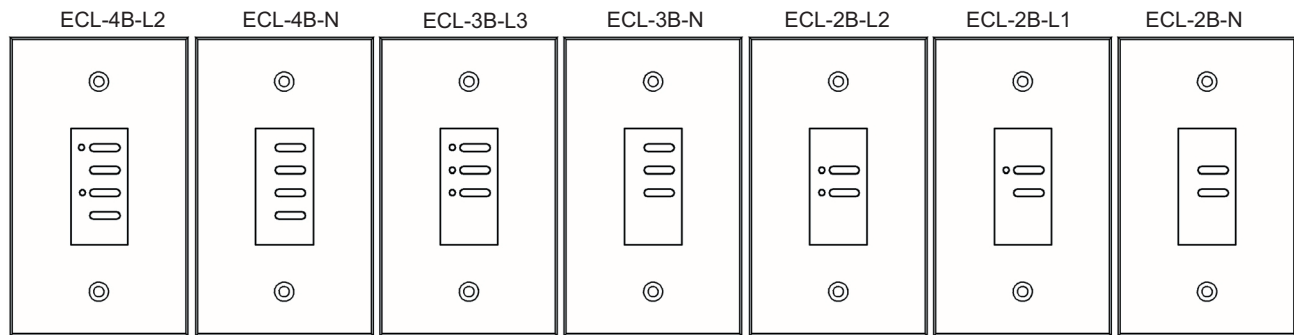

It can be used in any low voltage control system. Models are available to control old systems from GE and Remcon, as well as all new systems by GE, Watt Stopper and Square D, by requesting the 24VDC shared common versions.

ECL-4B-L4

Features:

- 2 wire momentary push button switch
- Multiple switch and status LED configurations
- Green LED pilot lights
- Housings can be engraved
- Available in single gang plastic covers
- 2 & 4 button versions designed to be compatible with 3-wire low voltage systems
