

Touch-Plate[®] Lighting Controls

SS-100 Motion Detector

General Info:

The SS-100 Infrared Motion Detector is used along with a Touch-Plate Lighting Control System to control lights based on passive infrared input from movement in a room. By placing the SS-100 in a room and wiring it any maintain contact input on a Touch-Plate panel it enables the system to switch lights on when someone enters the room and keep them on until they leave. The SS-100 operates to control lights just as a normal, maintain switch would operate. Multiple detectors may be used in the same lighting control system to detect movement wherever needed. The sensor has adjustments for both sensitivity and time delay.
