## Ultra 2-Wire Wiring Diagram for Digital Systems

Use the following to wire a Ultra Smart Station. Digital systems are Touchplate systems. Each system will have different components and this document does not show all possible connections.

## Button Layout

## Wiring Information

- Non-polarity sensitive (topology free)
- Can be home runned, daisy chained, or a combination of both
- Touchplate recommends the use of Tappan 1680AB2/CMP/WHITE (16 AWG, 2 Conductor Unshielded) or equivalent wire

## Communicating to and Powering the Station

- Communication and Power will typically come from a Smart Control Gateway, Smart Control Link, Time-Keeper ${ }^{\oplus}$ or Time-Keeper ${ }^{\circledR}$ Max
- Communication and data terminals are typically green terminals

## Address Dip Switch Settings

Use the following to change an Ultra Station Address. Normally, addresses are typically preset at the factory. Make sure not to duplicate addresses, as each station needs to have its own unique address.

Do not change values unless directed by Touchplate!!! DIP SWITCH \#8 ALWAYS STAYS ON!!!

| Address | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | ON | OFF | OFF | OFF | OFF | OFF | OFF | ON |
| 2 | OFF | ON | OFF | OFF | OFF | OFF | OFF | ON |
| 3 | ON | ON | OFF | OFF | OFF | OFF | OFF | ON |
| 4 | OFF | OFF | ON | OFF | OFF | OFF | OFF | ON |
| 5 | ON | OFF | ON | OFF | OFF | OFF | OFF | ON |
| 6 | OFF | ON | ON | OFF | OFF | OFF | OFF | ON |

| 14 | OFF | ON | ON | ON | OFF | OFF | OFF | ON |
| 15 | ON | ON | ON | ON | OFF | OFF | OFF | ON |
| Through Address $96-U s e ~ t h e ~ t a b l e ~ b e l o w ~ t o ~ c a l c u l a t e ~ S m a r t ~ S w i t c h ~ A d d r e s s ~$ |  |  |  |  |  |  |  |  |

Valid addresses are 1 to 96. Addresses are set using the eight Address Dip Switches.

| Address Dip Switch | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Value | 1 | 2 | 4 | 8 | 16 | 32 | 64 | 128 |

The values of all switches in the ON position are added together and the total is equal to the address. See the examples below:

- Smart Control Station Address 1: Turn on switch 1 only and leave all other Address switches off.
- Smart Control Station Address 13: Turn on switches 1, 3, and 4. The values of those switches are $1+4+8=13$.

## Option Dip Switch Settings

Use the following to change the LED color and/or intensity. If using a Touchplate Controller, the software will control the color and intensity and override the Option Dip Switch settings.
